

# 2077<sup>by EURAL</sup> LEAD FREE

According to:  
EU directives RoHS II, ELV, REACH

## Applications

**2077 LEAD FREE by EURAL** is a free-cutting aluminium alloy with the best machinability within the hard alloys and with extremely high mechanical properties. It has been developed by Eural Gnutti and can overperform alloys as 2017, 2017A, 2014, 2014A, 2024, 7020 and 7022 and can compete with 7075 alloy. Its excellent machinability, a guarantee of high yield/productivity, has no comparison within the hard aluminium alloys.

## High Machinability

**2077 LEAD FREE by EURAL** has been specifically developed to be machined on high speed automatic lathes thanks to its thin chip formation.

## Production range

**2077 LEAD FREE by EURAL** is available both as drawn and extruded condition. Drawn round bars Ø 10-76,2mm Temper T6  
Extruded round bars Ø 30 – 254mm Temper T6 and T4

Available also in square, rectangular and hexagonal bars. A wide range of drawn bars are also available in h9 tolerance.

## FREE CUTTING Aluminium alloy

## Green choice

For many years RoHS II regulations permit, with an exception, a maximum lead content in aluminium alloys up to 0,4% by weight. Such limit is under discussion for a further reduction. REACH recently included lead in SVHC list as highly toxic element for human health.

**2077 LEAD FREE by EURAL** is ready in anticipation of any possible future scenario because it is free of lead.

Alloy with high recycled aluminium content.

## No tin

Today there are several 2000 series alloys with contain tin (Sn) which is well known to cause weakness and cracking of machined parts when submitted to stress or high temperatures (> 160°C). Tin, due to its brittle nature, has the dangerous tendency to break without significant previous deformation (strain). **2077 LEAD FREE by EURAL** does not contain tin.

## Alternative alloy to:

**2077 LEAD FREE by EURAL** is the best alternative option to many hard alloys such as 2017, 2017A, 2014, 2014A, 2024, 7020, 7022 and 7075. Furthermore, thanks to a very high yield strength (Rp0.2), it can be an option to replace, depending on the final application, certain stainless steel (AISI 303/4/4L/316/L), cast iron (GH 350/500) and brass (CW608N R360).

# EURAL

GNUTTI S.p.A.

**2077 LEAD FREE by EURAL** is member of free-cutting alloys, lead free, developed by the Eural Research & Development department and born thanks to the never-ending vision of the Gnutti family. It's an alloy which was missing until today, an alloy that mixes very high mechanical properties and excellent machinability.

## Ultrasonic tested billets

All semi-finished products in **2077 LEAD FREE by EURAL** are made by Class A ultrasonic tested billets (SAE AMS-STD-2154).

## RoHS & REACH and other metals

The imminent restrictions about the maximum lead content allowed will affect all products obtained by mechanical processing, including steel, cast iron and brass. These metals, without the lead which was a guarantee of good or acceptable machinability, will not be allowed anymore. For all these cases, the only option in terms of machinability is aluminium and the best choice available today is **2077 LEAD FREE by EURAL**.

### PRODUCTION PROGRAM

Unit: mm	●	■	■	●
Drawn	10 ÷ 76,2	To be defined	To be defined	To be defined
Extruded	30 ÷ 254	30 ÷ 165	Thick. 30 ÷ 127	-

**According to EU directives:**  
2000/53/EU (ELV) - 2011/65/EU (RoHS II)  
Ready to imminent restrictions on lead content because LEAD FREE

### PRESENTATION

This alloy has very high mechanical properties, high fatigue strength, good forging attitude and excellent machinability on high-speed lathes.

Eural alloy 2077 is the first and only hard alloy with superior characteristics to 2024, which guarantees a chip formation comparable to 2011 and 2033, thus very high productivity, tighter tolerances, better surface roughness and longer tool life.

Eural 2077 is the best alternative to alloys 2017, 2017A, 2014, 2014A, 2024, 7020, 7022, 7075.

Due to its high mechanical properties and excellent machinability, it can replace certain types of steel and cast iron.

**Main applications:** valves, bolts and nuts, threaded bars, structural and high resistance components.

Properties	T6	T4
Machinability	Excellent	Excellent
Protective anodizing	Good	Good
Decorative anodizing	Good	Good
Hard anodizing	Good	Good
Resistance to atmospheric corrosion	Good	Good
Resistance to marine corrosion	Good	Good
MIG-TIG weldability	Good	Good
Resistance weldability	Good	Good
Brazing weldability	Good	Good
Plastic formability when cold	Good	Good
Plastic formability when hot	Good	Good
