

2033 by EURAL LEAD FREE

FREE CUTTING Aluminium alloy

EURAL

GNUTTI S.p.A.

According to:

RoHS II, ELV, REACH directives

Applications

2033 LEAD FREE by EURAL is an alloy of multiple potential applications; it gives an excellent machinability thanks to a very thin chip forming, high mechanical properties, better anodizing and weldability attitude if compared to alloys such as 2011, 2007, 2030.

2033 LEAD FREE by EURAL is a good alternative to alloys 2011, 2007, 2030 after latest RoHS/REACH restrictions (Pb \leq 0,1%).

High Machinability

2033 LEAD FREE by EURAL has been developed specifically for being machined on high-speed automatic lathes thanks to its excellent chip forming performance.

Production range

2033 LEAD FREE by EURAL is available both as drawn and extruded condition.
Drawn round bars \varnothing 5 - 76,2mm
Tempers T3, T351 and T8.
Extruded round bars \varnothing 30 - 254mm
Tempers T6

Available also in square, flat and hexagonal bars.

A wide range of drawn bars is also available in h9 tolerance.

RoHS and REACH

The latest RoHS directive (2018/740/EU) fixes the limit of lead allowed in aluminium alloys for machining purposes to 0,1% starting from 18/05/2021.

REACH has recently mentioned lead in SVHC list as toxic element for human health and subject to specific authorization whenever its presence is more than 0,1%.

EURAL Gnutti SpA is ready with alloy **2033 LEAD FREE by EURAL**.

2033 LEAD FREE by EURAL is the result of long and accurate work by EURAL Research & Development Department in order to make available an aluminium alloy with high machinability and having better features than those today in the market.

No tin

Today there are several alloys from 2000 series aluminium + tin (Sn) which, as well known, causes weakness and cracking of machined parts when submitted to stress, low or high temperatures ($< 13^{\circ}\text{C}$ or $> 160^{\circ}\text{C}$).

Tin, due to its brittle nature, has the dangerous tendency to suddenly break without significant previous deformation (strain).

2033 LEAD FREE by EURAL does not contain tin.

Ultrasonic tested billets

All semi-finished products in **2033 LEAD FREE by EURAL** are made by Class A ultrasonic tested billets (SAE AMS STD 2154).

Alternative alloy to:

2033 LEAD FREE by EURAL is the best alternative to several alloys such as 2007, 2030, 2011, 2028A, 2041, 2044, 7020.

RoHS and other metals - Pb \leq 0,1%

The latest restrictions on lead (RoHS Pb \leq 0,1%) concern also those products made from machining of steel and brass. Steel from Pb \leq 0,35% down to Pb \leq 0,1%
Brass from Pb \leq 4% down to Pb \leq 0,1%
For these metals today the only alternative for machinability is aluminium and a good option is **2033 LEAD FREE by EURAL**

Colour code

PRODUCTION PROGRAM

Unit: mm	●	■	■	◆
Drawn	5 ÷ 76,2	10 ÷ 65	Thick. 12 ÷ 55	10 ÷ 63,5
Extruded	30 ÷ 254	30 ÷ 165	Thick. 30 ÷ 127	-

According to EU directives:
2000/53/EU (ELV) - 2018/740/EU (RoHS II)

PRESENTATION

This alloy has been developed by EURAL and it is one of the best for high speed automatic lathes. It gives the following advantages:

- Easy machining with any tool
- Excellent chip forming performance (thin chip)
- Longer tool life
- High mechanical properties
- Better anodizing and weldability attitude compared to alloys 2011, 2007, 2030.

This alloy does not contain neither lead nor tin and therefore it is a good solution for the production of parts under the latest restriction on this topic (2018/740/EU RoHS: Pb ≤ 0,1 starting from 18/05/2021).

Main applications: automotive industry, electric and electronic industry, precision machining, defense, forging, screws, bolts, nuts, threaded parts of thin thickness.

Properties	T3/T6	T8
Machinability	Excellent	Excellent
Protective anodizing	Good	Good
Decorative anodizing	Good	Good
Hard anodizing	Good	Good
Resistance to atmospheric corrosion	Good	Good
Resistance to marine corrosion	Good	Good
MIG-TIG weldability	Good	Good
At resistance weldability	Good	Good
Brazing weldability	Good	Good
Plastic formability when cold	Good	Good
Plastic formability when hot	Good	Good

Legend

Samples of finished products made of Eural bars

Chemical composition	
Si	0,10 ÷ 1,20
Fe	≤ 0,70
Cu	2,20 ÷ 2,70
Mn	0,40 ÷ 1,00
Mg	0,20 ÷ 0,60
Cr	≤ 0,15
Ni	≤ 0,15
Zn	≤ 0,50
Ti	≤ 0,10
Bi	0,05 ÷ 0,80
Others	Each 0,05 Total 0,15
Al	Remainder

Physical properties	
Density	Kg/dm ³ 2,77
Modulus of elasticity	MPa 70.000
Coefficient of thermal expansion	x10 ⁻⁶ /°C 22,9
Thermal conductivity at 20°C	W/mk T3: 151 T8: 173
Typical electrical resistivity at 20°C	Ω mm ² /m T3: 0,046 T8: 0,046

Minimum mechanical properties					
Temper	Diam. mm	Rm	Rp0,2	HBW	
		MPa	MPa	A%	Typical
