

It is the policy of **EURAL GNUTTI S.p.A.:**

- To ensure that its activities are carried out in accordance with current legal provisions and with any codes of practice to which it subscribes..
- To implement every effort in organisational, operational and technological terms for the continuous improvement of its environmental and energy management system, for the prevention of soil, water and air pollution, for the continuous improvement of their quality and for the optimisation of energy performance.
- To define environmental and energy objectives and plan activities to achieve them by integrating them into the operational management of the plants.
- To define objectives to promote renewable energy to address climate change and reduce greenhouse gas emissions. Implement every effort to expand the supply of renewable, sustainable energy that does not deplete natural resources and for the continuous reduction of carbon emissions.
- To produce technologically advanced products with lower environmental and energy impact, also from a life-cycle perspective.
- To reduce, where technically possible and economically sustainable, any negative impact of its activities, products and services on the environment.
- To reduce, where technically possible and economically sustainable, the energy consumption of its activities by using supplies of goods and services with the best energy performance and optimising processes.
- To minimise the consumption of water and raw materials, favouring their recovery and recycling.
- To minimise the production of waste, favouring its recovery where possible.
- To implement all efforts through common actions and strategies aimed at reducing greenhouse gases that contribute to global warming and climate change, in compliance with current international agreements and regulations.
- To accommodate the explicit and implicit needs of customers and stakeholders in general.
